Who are we, and what do we do?

What makes a space pleasant?

You'd be surprised how much the items hanging on walls or ceilings impact the comfort and acoustics of a room. Wall decorations, signage, or directions – they affect people and influence their behavior. At STAS, we provide flexible hanging systems and accessories that improve spaces. We believe these solutions should serve the purpose of the room.

This is how STAS provides a complete solution for your space, ensuring...

- ... students can work in either stimulating or low-distraction environments
- ... art lovers can enjoy collections that are neatly and safely displayed
- ... guests in restaurants opt for a coffee after dessert
- ... meetings in conference rooms become more efficient
- ... you can easily adjust your home's interior to suit your mood

With STAS, you'll never need to drill unnecessary holes in your walls again, and you can rearrange or move items whenever you like. From light to dark, or functional to decorative – the choice is yours.

So... how will you design your space?

STAS. Transform your room.

The STAS Formula

- A solution for every wall and ceiling
- Quick and obligation-free advice on-site
- High-quality and safe products
- Tested and certified by TÜV Netherlands
- For every budget
- Expert project team with over 25 years of experience
- Full-service: from advice to installation
- Dust-free installation with our own installation team
- 5-year warranty

Multifunctional spaces

Flexible arrangements

Space is precious. Optimizing workplaces or flexible spaces has been a priority for years. What if one room could serve multiple purposes? With a STAS hanging system, you can transform an office into a workspace, lunch area, meeting room, showroom, or exhibition space simply by adjusting the wall and ceiling setup.

Sustainable building management

Did you know that a STAS hanging system contributes to sustainable building management? Once installed, walls and ceilings remain undamaged, even when the room's purpose or users change, and the setup is entirely reconfigured. This saves on repairs in the long run, offering a practical cost-saving solution.

Solutions for every wall and ceiling

Glass or metal walls? Columns? Awkward corners? Curved or wavy walls? Very high ceilings? No problem!

Over the years, we've tackled countless unique projects, and we confidently claim to have a solution for every wall and ceiling. Got a specific question? Let us surprise you with the many possibilities we can offer.

STAS hanging systems: a stylish solution

Our solutions come in various colors, shapes, and materials. Beyond functionality, they can be highly stylish. From modern aluminum rail systems to classic wooden hanging systems, fully integrated setups (in plasterwork, suspended ceilings, or structures), and systems in trendy black – we've got it all.

A Cozy Interior

The impact of art

Scientific research shows that art in offices or hallways directly impacts productivity, creativity, and absenteeism. People generally feel happier in a pleasant work and learning environment compared to a bare, gray space. Moreover, your organization's design is its business card for potential clients, students, or employees, leaving a lasting impression. Plenty of reasons to invest in a flexible wall and ceiling system that hangs items beautifully and securely.

"Because the delivery and the move to the campus had to take place during the summer vacation, flexibility was required from all parties to carry out the work. STAS responded well to this, enabling them to complete the work on time and in collaboration with others."

"Art in offices or hallways directly impacts productivity, creativity, and absenteeism."

Say goodbye to noise pollution

In addition to art, good acoustics are essential for a healthy work environment. Noisy spaces lead to concentration problems and higher energy consumption throughout the day.

Acoustic panels absorb excess noise, protecting visitors, employees, and students from disturbances. We offer products for hanging both acoustic panels and objects in open spaces.

Enhancing colors

The STAS multirail lets you hang and illuminate artwork flexibly using different lighting fixtures that clip into the rail. In addition to standard LED lights, we also offer smart LED lighting. The STAS Wi-Fi smart LED can be used with a STAS fixture and a free app, allowing you to control, dim, and customize your lighting in terms of color, intensity, and timer schedules.

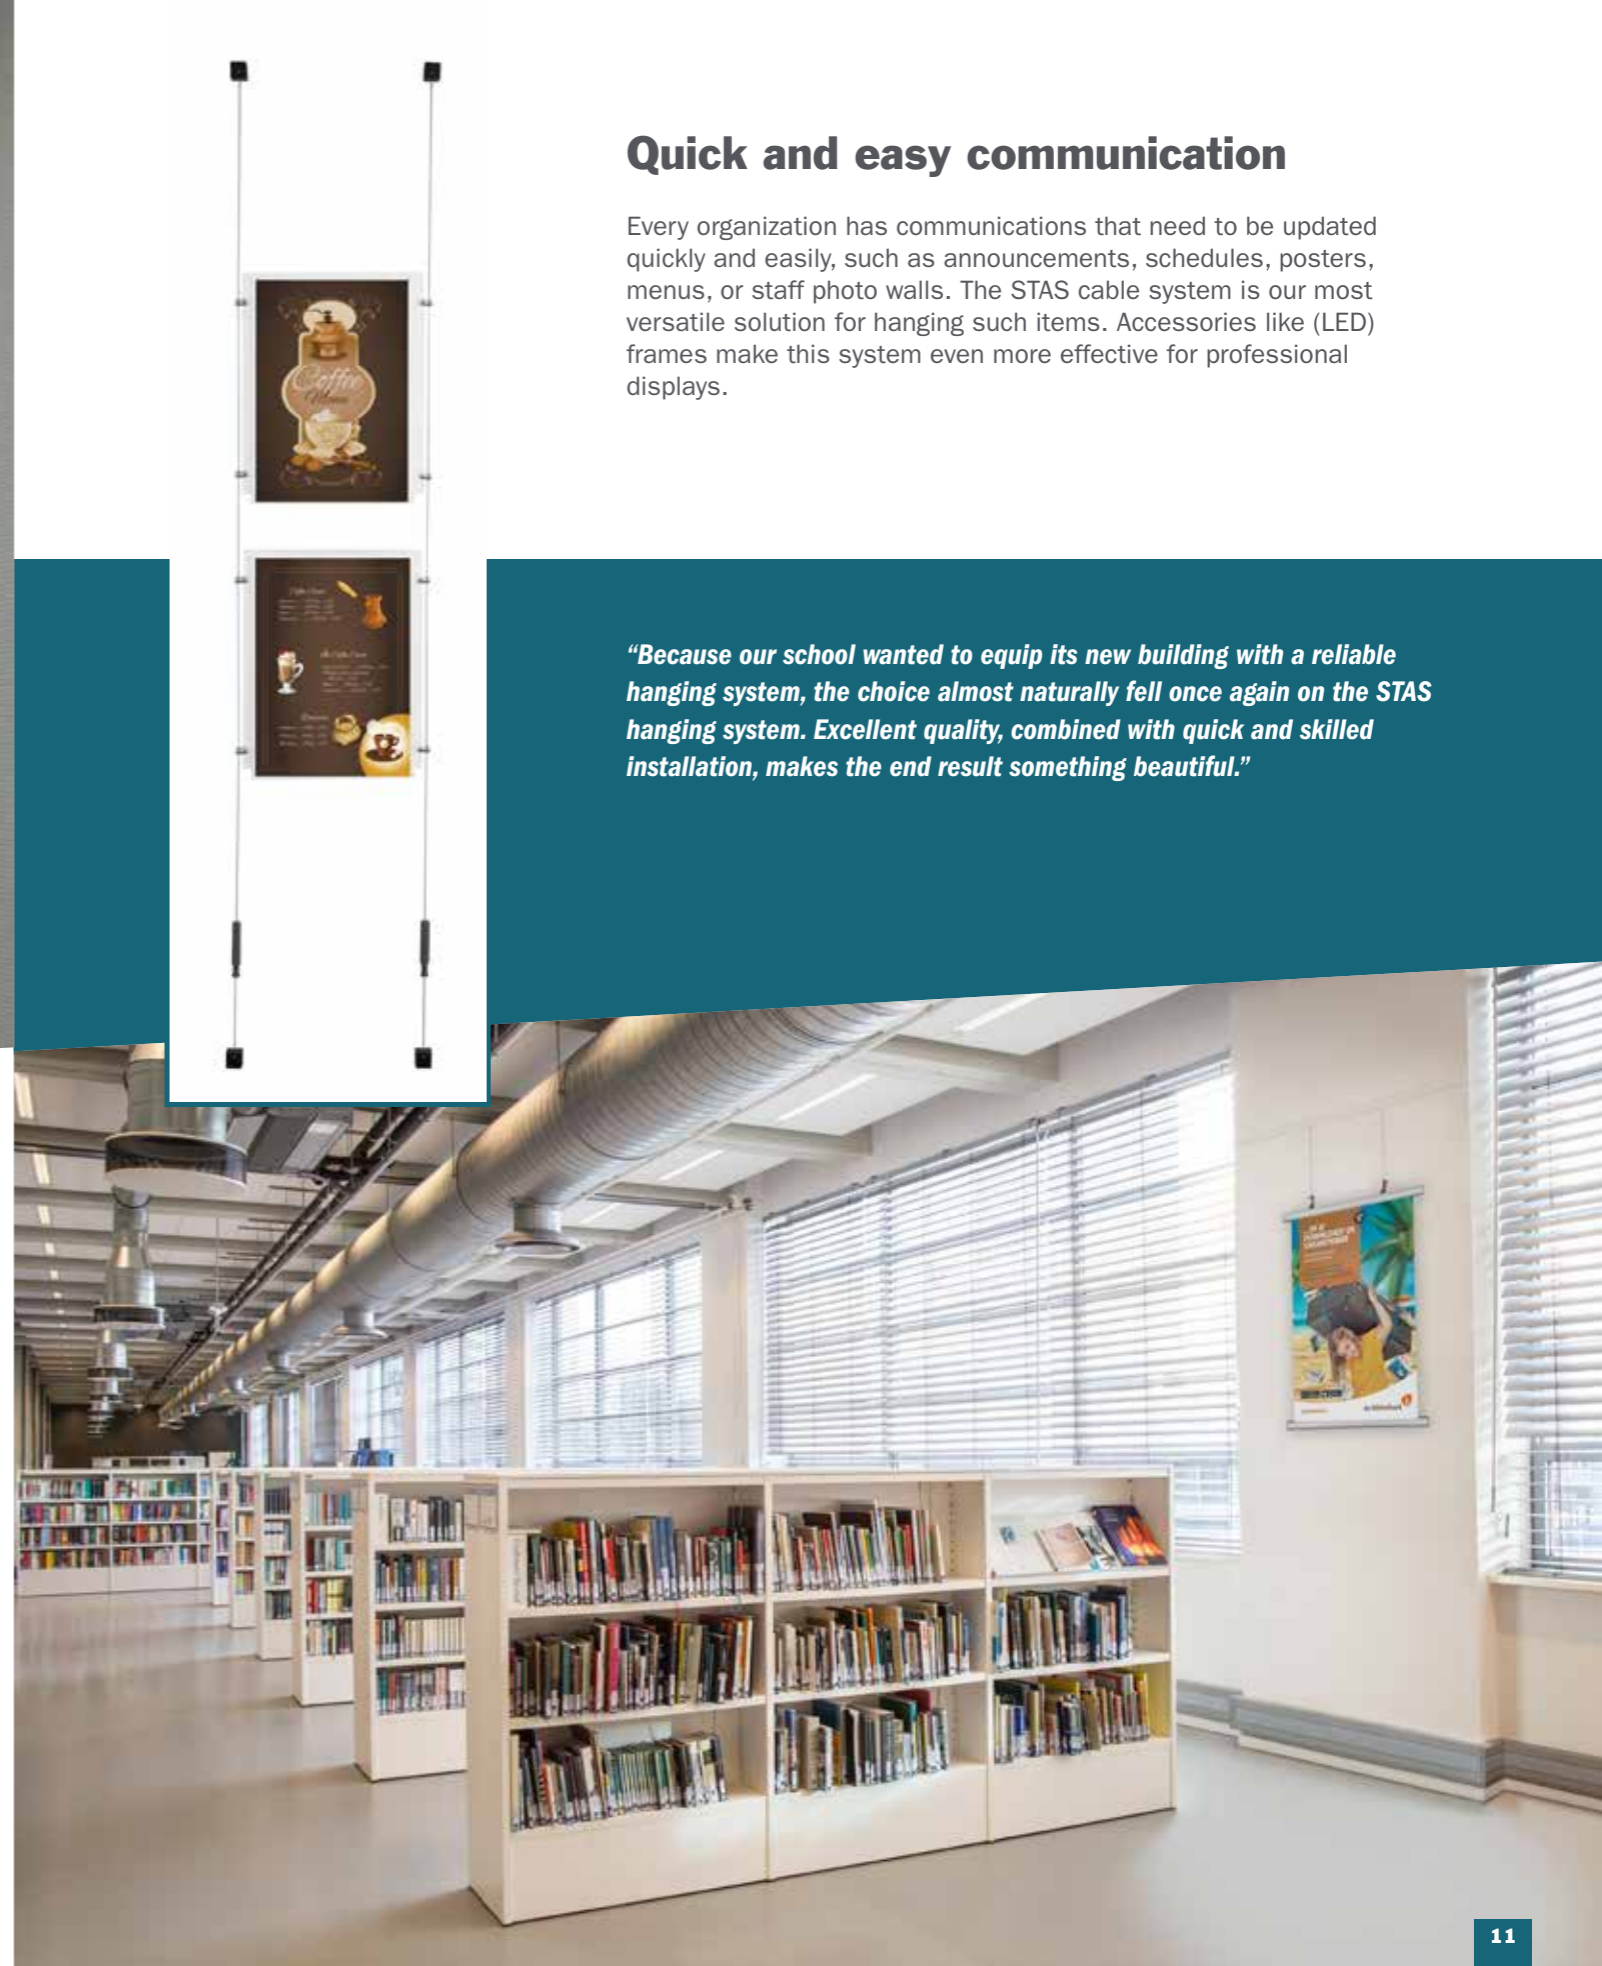

Clear Communication

Logical signage

In large buildings with a maze of corridors, clear signage is essential for safety and logistics. Our products for hanging ceiling signs, directional signage, lighting, and more ensure a meticulously organized ceiling layout.

Hanging kits for every situation

Alongside products for hanging ceiling signs, we offer complete kits for hanging lighting, pipes, advertisements, and other objects. These kits include ceiling mountings.

Quick and easy communication

Every organization has communications that need to be updated quickly and easily, such as announcements, schedules, posters, menus, or staff photo walls. The STAS cable system is our most versatile solution for hanging such items. Accessories like (LED) frames make this system even more effective for professional displays.

“Because our school wanted to equip its new building with a reliable hanging system, the choice almost naturally fell once again on the STAS hanging system. Excellent quality, combined with quick and skilled installation, makes the end result something beautiful.”

Effective Collaboration

Effective collaboration thrives in a supportive work environment. Our wide range of presentation boards allows for more interactive and productive brainstorming sessions.

Limitless creativity

Great ideas don't have to stop at the edge of a whiteboard. STAS scrum walls can cover the entire width of a room and, like our other whiteboards, glass boards, and pinboards, can be custom-made. Additionally, we offer movable or adjustable whiteboards for on-the-spot meetings in any room.

Everything within reach

The STAS papergrip lets you easily slide or clip papers into the rail, making it ideal for keeping important documents, notes, posters, or files both visible and organized.

STAS whiteboards can also be flexibly hung on the papergrip using the STAS papergrip hanger.

“Effective collaboration thrives in a supportive work environment.”

Theft-deterrent security

Looking for extra security? Our hooks with safety clips are designed to prevent artwork from falling due to impact or vibrations. These clips also offer theft-deterrent protection, ensuring your collection is securely displayed – giving you peace of mind.

“Our safety clips prevent artwork from falling due to impact or vibrations.”

Safety

First

Hanging heavy or high items

Art must be securely and safely hung. We offer a wide range of rail systems for safely hanging, rearranging, and illuminating (extra heavy) artworks. For hanging art at heights, we provide special systems with rods that can be inserted into the rail groove from below.

TÜV certified

High-quality materials and patented designs ensure that STAS products offer a durable solution for years of use without bending or discoloration.

To guarantee the quality and safety of our products, all are thoroughly tested, and the majority of our range is certified by TÜV Netherlands.

Our Process

Maximizing your space

Every project starts with a no-obligation introduction. Together, we'll review your project needs and the space in question. We'll discuss the room's function and how STAS products can maximize its potential.

STAS interior plan

Excited? We'll translate your wishes into a custom-made STAS interior plan. We deliver a complete solution considering functionality, style, and feasibility. With years of experience, our consultants provide surprising solutions you might not have thought of.

Quick quotes and on-site measurements

Once the interior plan is finalized, we'll send a preliminary quote. This is followed by an on-site measurement appointment, after which we'll provide a final quote. On-site measurements allow us to anticipate potential challenges and streamline project planning.

End-to-end project planning

Once the quote and plan are approved, we move to project planning, coordinating seamlessly with other suppliers. We're happy to take full responsibility for the installation process.

In-house installation team

Our expert and VCA-certified technicians can complete your project's installation within 6–7 weeks. We create a detailed installation plan, considering elements like cabinets and outlets. Our team ensures a dust-free installation and leaves everything tidy.

Follow-up

After the project is completed, we'll check in to ensure everything went smoothly. Feedback on the entire process is always welcome!
